Scenario 1: Windows → EC2 - 1 → EC2 – 2

Procedures:

1 - FIRST WINDOWS SERVER (EC2 - 1):

- Login into AWS account and go to AWS Console.
- Click EC2 (AWS Services).
- Create an instance:
   - i. Name – Computer A
   - ii. AMI – Windows server AMI
   - iii. Instance type – t3.micro
   - iv. Create key pair – task1 (.pem)
   - v. Security group -: name – first-ec2-sg-2025-08
   - vi. Inbound rule: RDP, port 3389, Source = My IP
- Check details and Click **Launch** instance**.**

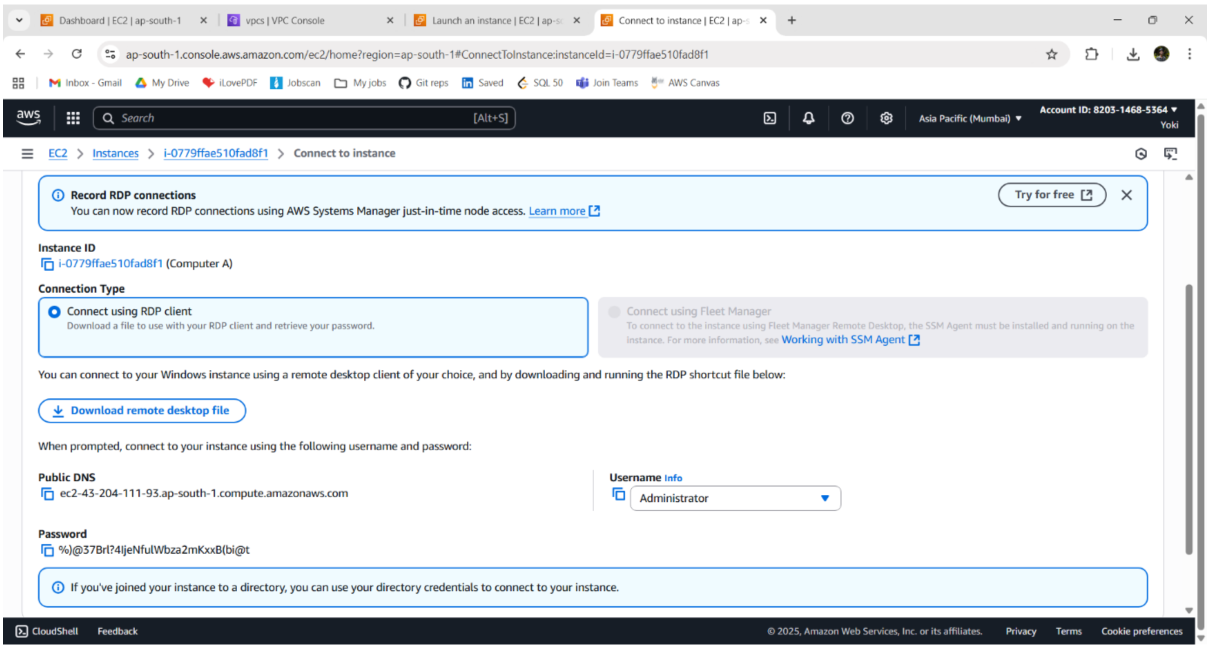
3 - GET COMPUTER A'S PASSWORD:

In EC2 → click Instances → click Computer A.

1. Click **Actions** → **Security** → Get **Windows password**.
2. Upload the task1.pem file, you downloaded earlier.
3. Click Decrypt Password — it will show Administrator and a password.
4. Copy that password somewhere safe (just for now).



4 - CONNECT FROM YOUR LAPTOP TO COMPUTER A (RDP)

1. On your laptop open **Remote Desktop** (type “mstsc” command in Windows Run).
2. In the box type the **Public IPv4** address of EC2-1 (you find it in the EC2 instance details).
3. Click **Connect**. When it asks, use username **Administrator** and the password you decrypted.
4. Now you are inside Computer A — Windows PC in the cloud!

Remote Desktop Connection
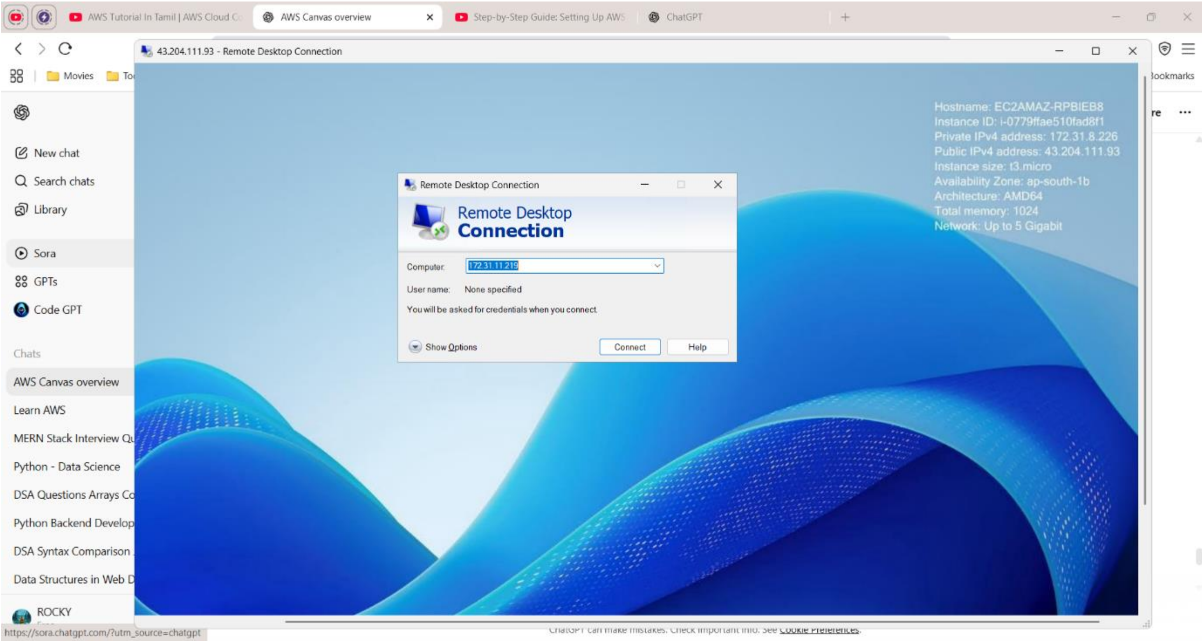
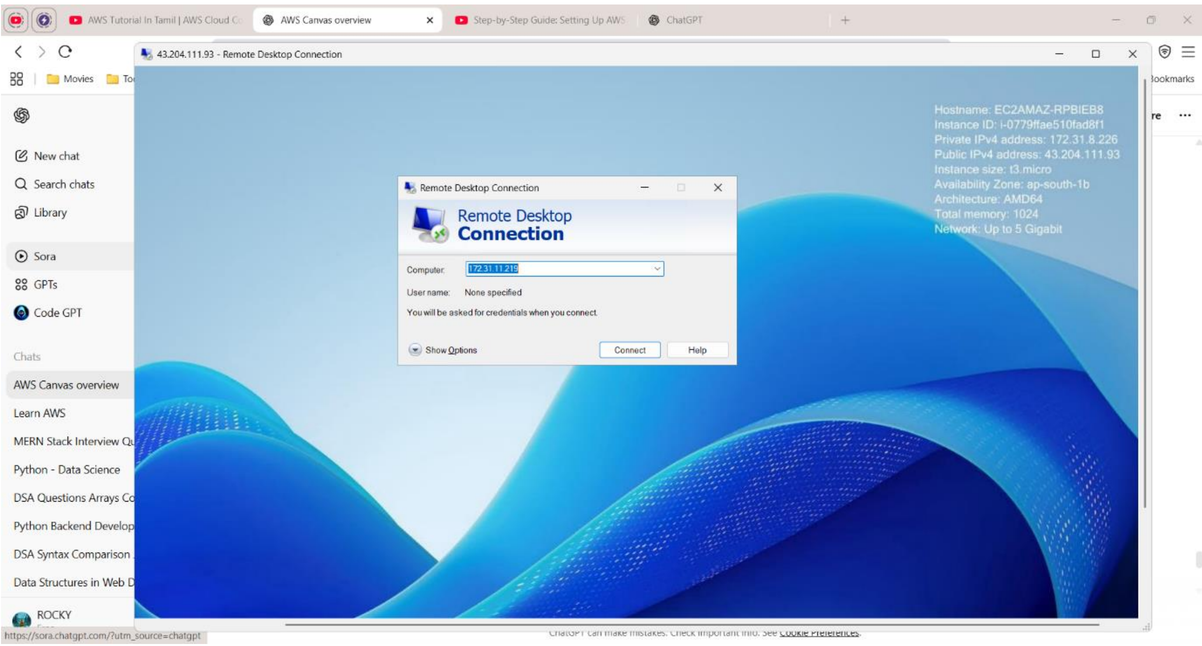
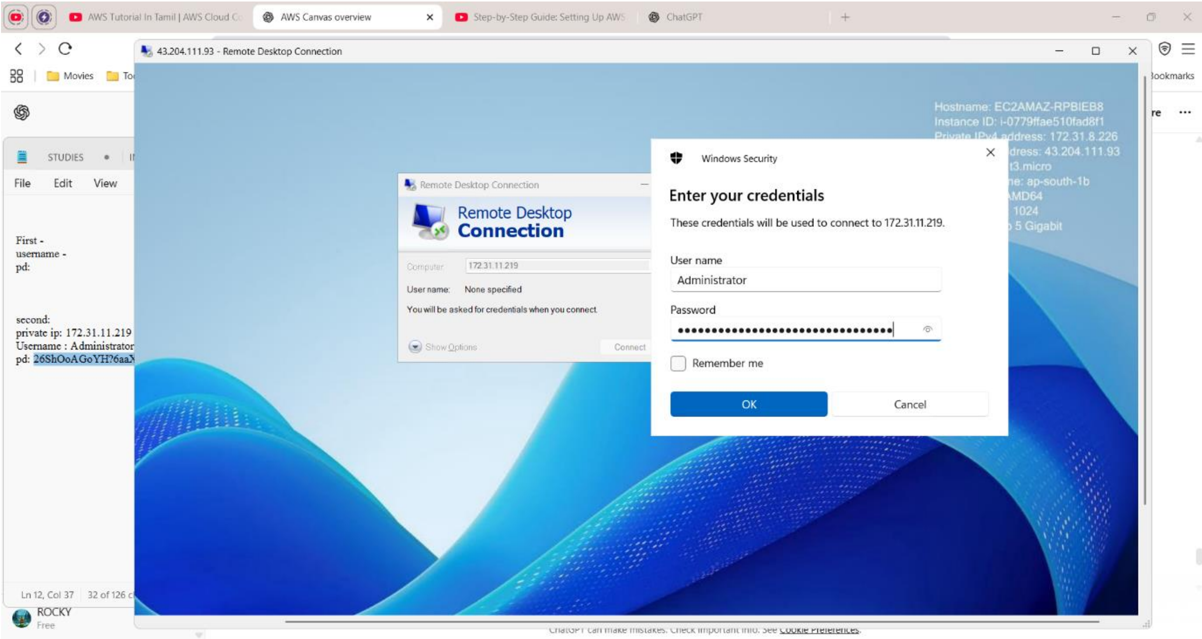
The identity of the remote computer cannot be verified. Do you want to connect anyway?
The remote computer could not be authenticated due to problems with its security certificate. It may be unsafe to proceed.
Certificate name
Name in the certificate from the remote computer:
EC2AMAZ-RPBIEB8
Certificate errors
The following errors were encountered while validating the remote computer's certificate:
The certificate is not from a trusted certifying authority.
Do you want to connect despite these certificate errors?
Don't ask me again for connections to this computer
View certificate...
Yes
No

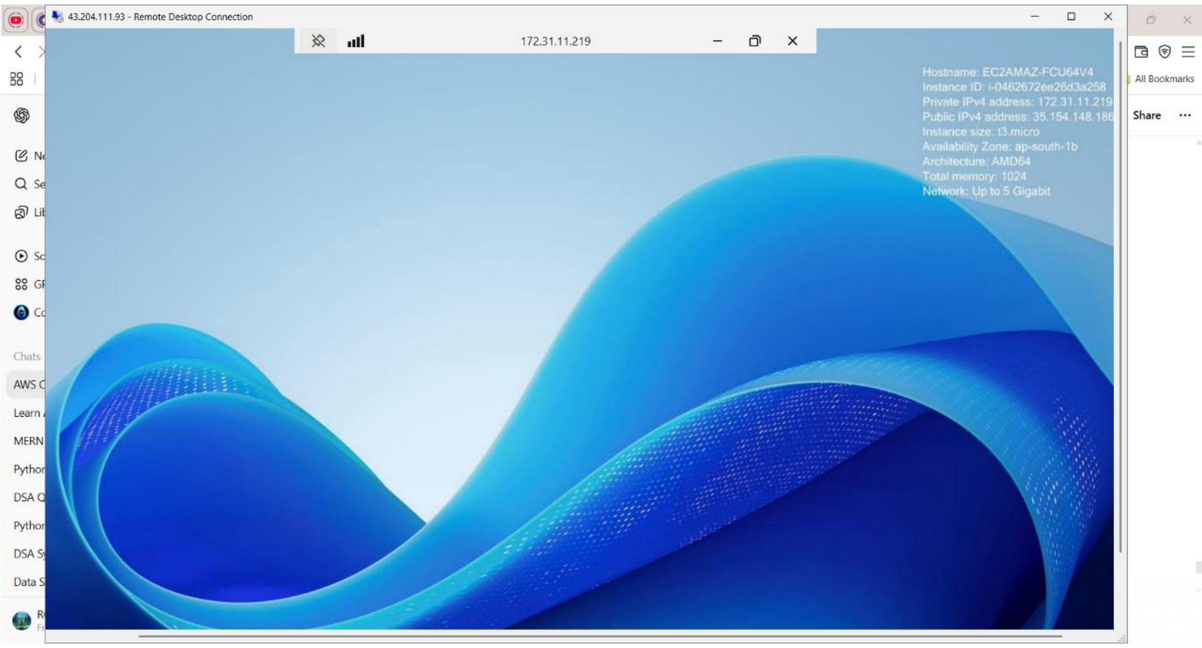


5 - GET COMPUTER B'S PRIVATE ADDRESS AND PASSWORD

1. In EC2 → click Computer B.
2. Copy the **Private IPv4** address.
3. Also get Computer B's password the same way: **Actions → Security → Get Windows password** and use task1.pem to decrypt.



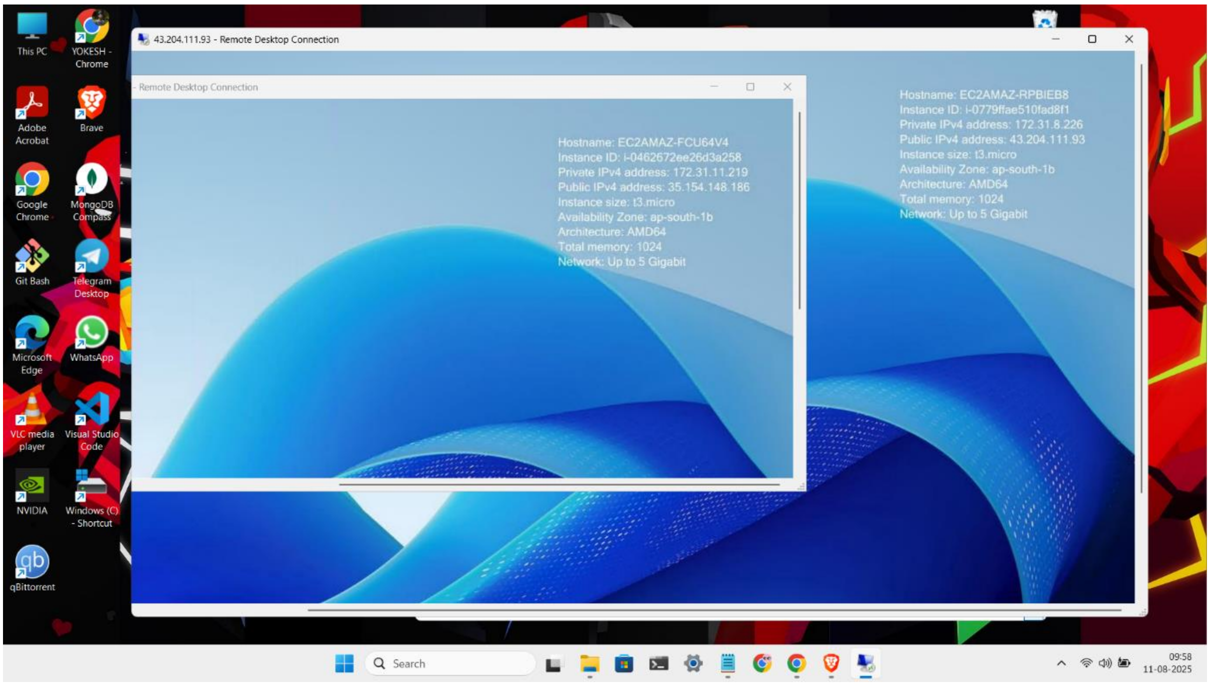




6 - FROM COMPUTER A, CONNECT TO COMPUTER B

1. Inside Computer A (you have its desktop open), open **Remote Desktop** on that machine.
2. In the Remote Desktop box type **Computer B's Private IPv4** (the 10.x.x.x address).
3. Connect using username **Administrator** and the password you decrypted for Computer B.

4. If the security rules are correct (we allowed first-ec2-sg-2025-08→ second-ec2-sg-2025-08), you will connect and see Computer B's desktop!



Scenario 2:

Windows → Windows EC2-1 → Linux/Ubuntu EC2-2

Procedures:

1 - FIRST WINDOWS SERVER (EC2 - 1):

- Login into AWS account and go to AWS Console.
- Click EC2 (AWS Services).
- Create an instance:
  - i. Name – Computer A
  - ii. AMI – Windows server AMI
  - iii. Instance type – t3.micro
  - iv. Create key pair – task2 (.pem)
  - v. Security group -: name – task2-1-sg-2025-08
  - vi. Inbound rule: RDP, port 3389, Source = My IP
- Check details and Click **Launch** instance**.**

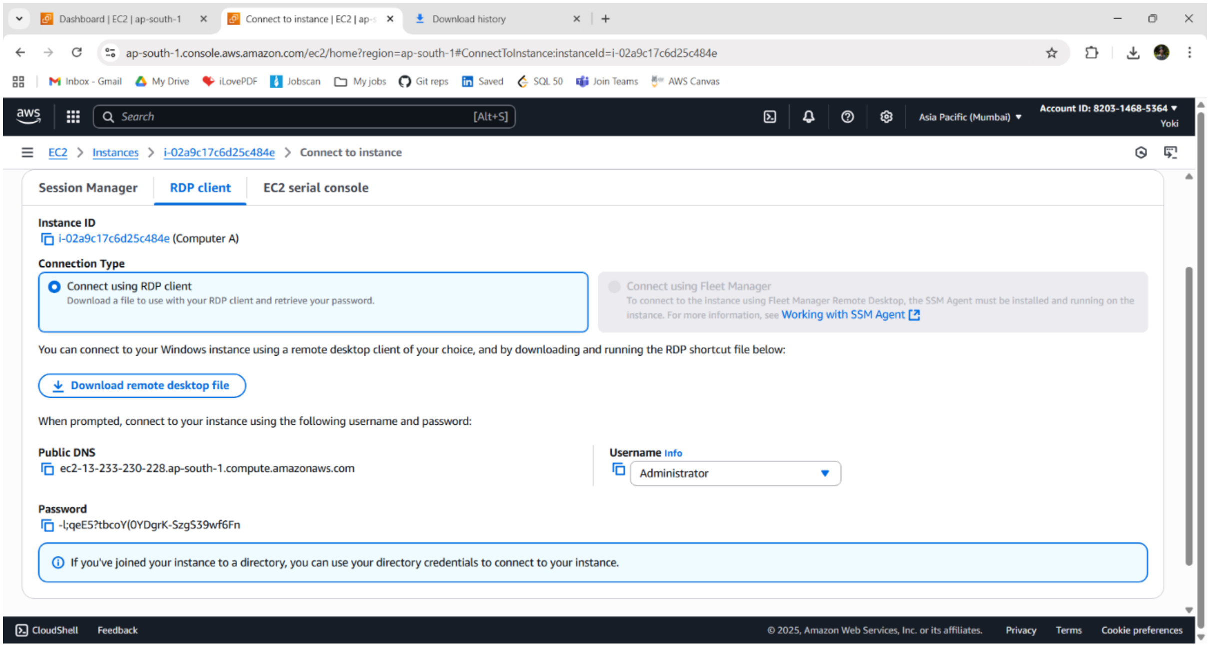
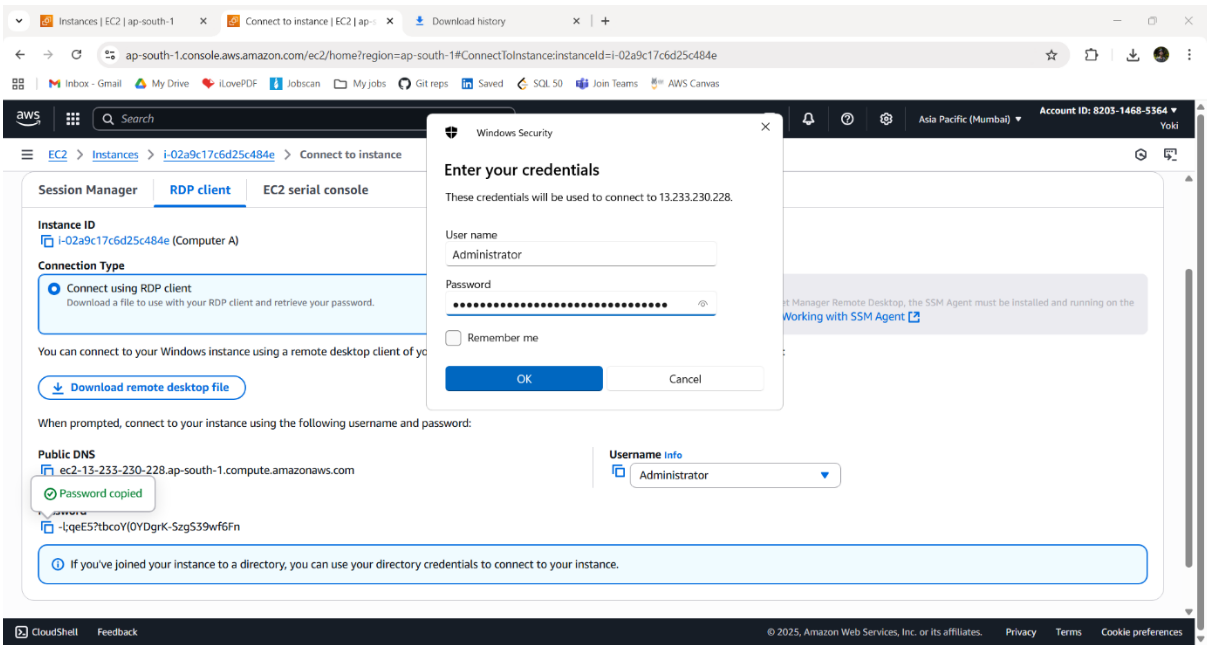
3 - GET COMPUTER A'S PASSWORD:

In EC2 → click Instances → click Computer A.

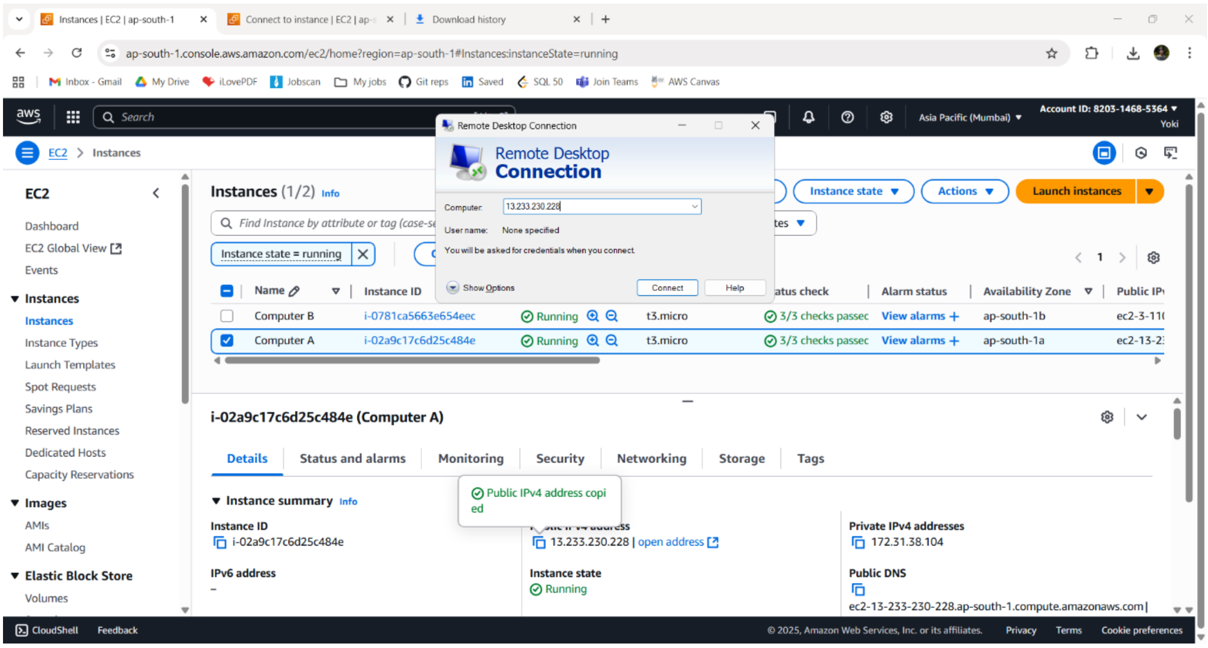
1. Click **Actions** → **Security** → Get **Windows password**.
2. Upload the task1.pem file, you downloaded earlier.
3. Click Decrypt Password — it will show Administrator and a password.
4. Copy that password somewhere safe.

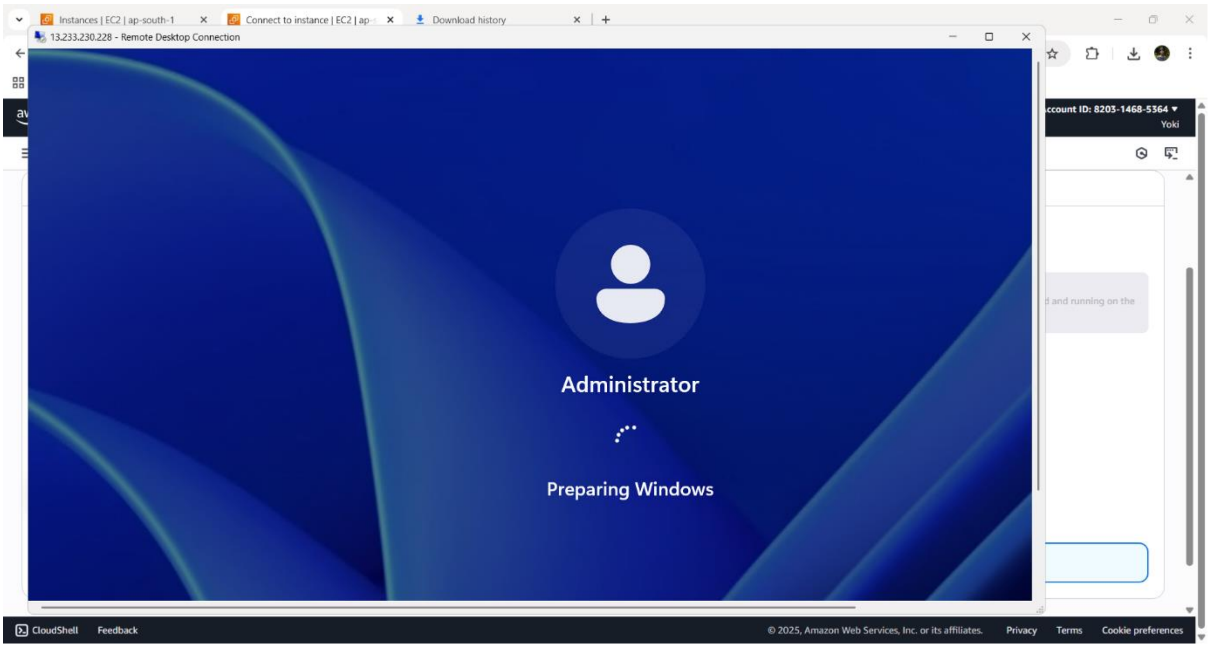




4 - CONNECT FROM YOUR LAPTOP TO COMPUTER A (RDP)

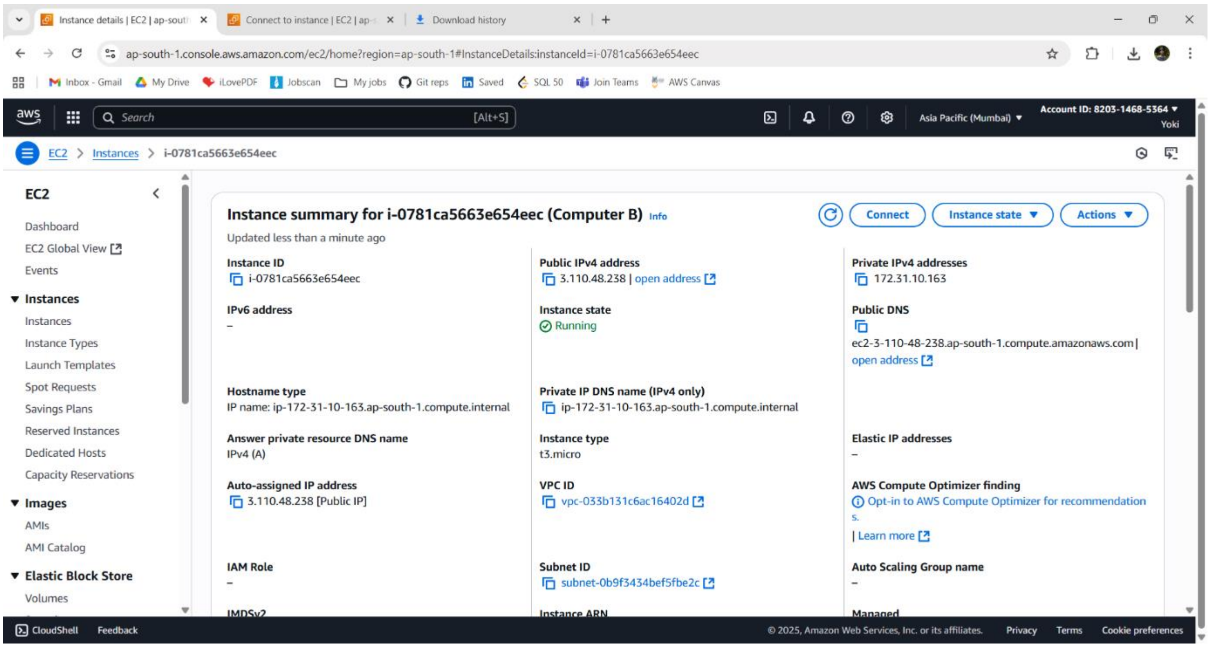
1. On your laptop open **Remote Desktop** (type "mstsc" command in Windows Run).
2. In the box type the **Public IPv4** address of EC2-1 (you find it in the EC2 instance details).
3. Click **Connect**. When it asks, use username **Administrator** and the password you decrypted.
4. Now you are inside Computer A — Windows PC in the cloud!





5 - GET COMPUTER B'S PRIVATE ADDRESS AND PASSWORD

1. In EC2 → click Computer B.
2. Copy the **Private IPv4** address.
3. Also get Computer B's password the same way: **Actions** → **Security** → **Get Windows password** and use task1.pem to decrypt.



6 - Prepare EC2-1 to connect to Linux

Inside EC2-1:

1. Open **PowerShell**.
2. Download and install an SSH client if not available (Windows Server 2019 usually has OpenSSH).
3. Copy your task2.pem into Computer A.
4. In PowerShell, run:

➔ ssh -i "C:\Users\Administrator\.ssh\task2.pem" ubuntu@172.31.10.163

5. When prompted, type **yes** to trust the connection.
